NON-DISCRIMINATION NOTICE

In accordance with Title VI of the Civil Rights Act of 1964 (42 U.S.C. §2000d et seq.), Section 504 of the Rehabilitation Act of 1973, as amended (29 U.S.C. §794), the Age Discrimination Act of 1975, as amended (42 U.S.C. §6101 et seq.), and Title IX of the Education Amendments of 1972, the Maine Department of Human Services does not discriminate on the basis of sex, race, color, national origin, handicap or age in admission or access to or treatment or employment in its programs or activities. Ann Twombly, Affirmative Action Officer, has been designated to coordinate our efforts to comply with the U.S. Department of Health and Human Services regulations (45 C.F.R. Parts 80, 84 and 91) and the U.S. Department of Education (34 C.F.R. Part 106) implementing these Federal laws. Inquiries concerning the application of these regulations and our grievance procedures for resolution of complaints alleging discrimination may be referred to Ann Twombly at 221 State Street, Augusta, Maine 04333, Telephone Number: (207) 289-3488 (Voice) or 1-800-332-1003 (TTY), or to the Assistant Secretary of the Office of Civil Rights, Washington, D.C.

MAINE POPULATION PROJECTIONS: 1987-1996

ACKNOWLEDGEMENTS

Special acknowledgement is due the State Planning Office who provided total population bases (hereafter referred to as partial populations) for five age groups for ten successive years into the future.

Under the general guidance of Ellen Naor, Director of the Office of Data, Research, and Vital Statistics, this report was produced by Dale Welch, Senior Researcher. The report was typed by Sue Whitley and Sylvia Cunningham.

INTRODUCTION

This report presents a series of annual population projections beginning with 1986, the most recent year for which estimates have been calculated, and continuing with yearly projections ten years into the future. This is the sixth series of small area population projections, with a supplemental report of minor civil division population by age group, prepared by the Office of Data, Research, and Vital Statistics.

This publication contains two separate sections. The first section shows the projected population totals through 1996 for each minor civil division in Maine. The second section shows the projected population of 12 age groups by sex through 1996 for the state and each of the 16 counties.

The following supplemental reports are also available:

1. Population projections by county and town through 1995 for each of the age groups under 5, 5-17, 18-44, 45-64, and 65 and over. Price $22.50 per copy.

2. Methodology for Maine population projections by county, age and sex, Resource Series No. 11. Price $5.00 per copy.

Copies may be obtained by contacting the Office:

TECHNICAL NOTES

Methodology:

The projection methodology is based on age-specific partial populations. The age-specific partial population for a given geographic area in any year is the sum of the following two components:

(1) The age cohort aged forward the appropriate number of years from the date of the most recent population estimate.

(2) The projected net migration for the age cohort of the geographic area.

The age-specific partial population for a given age cohort thus excludes the natural increase of that cohort.

Age-specific partial populations for the state, for five age groups, were produced by the Maine State Planning Office for the years 1987 through 1996. Age-specific partial populations are then calculated for each Minor Civil Division (MCD) on the last census date (April 1, 1980) and on the date of the most recent population estimates (July 1, 1986).* The proportion or share of the state age-specific partial population represented by each MCD's age-specific partial population is computed for April 1, 1980 and July 1, 1986. Using the assumption that the annual rate of change in each MCD's share of the state age-specific partial population between the last census date and the last date of population estimate will continue throughout the projection period (1987-1996), the final projected age-specific partial population is calculated for each MCD for each year of the period being projected.

*Welch, D. Population Estimates for Minor Civil Divisions by County, Maine, 1986, Maine Department of Human Services, Office of Data, Research, and Vital Statistics, October, 1987.

The final population projection for each age group in each MCD is produced by adding the projected natural increase of each age cohort to the projected partial population of each MCD.

The following three basic assumptions are inherent in these projections:

(1) There will be a very small decrease in the birth rate during the next decade.

(2) There will be a very small decrease in the death rate during the next decade.

(3) The net migration pattern during the next decade for each MCD will be the same as it was estimated to be during the 75 month period following the 1980 census.

It should be emphasized that the third assumption is by far the most critical factor in determining the quality of these projections, particularly for small geographic areas.

Projections of less than 100 are unrounded. Projections between 100 and 1,000 are rounded to the nearest 10 and projections greater than 1,000 are rounded to the nearest 50. The sum of a given component in these projections may not add to the state total because of these rounding procedures.

A more detailed description of the methodology is presented in Resource Series Number 11, "Methodology for Maine Population Projections, by County, Age, and Sex", published by the Bureau of Health Planning and Development.

Quality of Projections:

Even though the state projections and the majority of the MCD projections appear to be quite reasonable, there are some MCD's for which the projections are questionable. Generally, the poor quality projections can be classified into the two types listed below:

Type 1. Those due to a poor 1986 estimate.

Type 2. Those due to an unusually large absolute rate of net migration between April 1, 1980 and July 1, 1985.

Examples of these two types are Limestone (Type 1), and Orono (Type 2).

If reports from the Department of Defense on the number of Military Personnel at Loring Air Force Base are accurate, then we have a poor estimate of the population in Limestone, which would very likely cause an over projection of the future population of Limestone.

Orono had an unusually large net migration outward, perhaps due to a decrease in the number of University of Maine students residing in Orono during the 75 months following the 1980 Census. Since this change is not likely to recur, the rate of out-migration probably will not continue at such a high level in future years. However, the projection methodology assumes the high outward migration will continue, probably resulting in a spuriously low projection.

Users of this report should be aware of the assumptions inherent in these projections. If the assumptions are not valid for the geographic area of interest, then the projections should be used with caution and adjustments to the projections may be necessary for some purposes.

Assessing the Accuracy of Projections:

Although data are not available for precise calculations of the accuracy of these state and county population projections, some assessment of the magnitude of error can be made*. The minimum absolute percent error as estimated in Tables 1-3, is based on the assumption that the estimated State of Maine populations prepared by the United States Census Bureau are perfectly accurate. The estimated maximum absolute percent error, shown in Tables 1-3, is based on the assumption that the estimates of the United States Census Bureau are of average quality. Therefore, based on the six one-year projections of the total state population that we have made, the mean probable range of the absolute percent error is between 0.2 percent and 1.1 percent. Based on the one six-year projection that we have made for which data are available to test accuracy, the probable range of the absolute percent error is between 0.1 percent and 1.5 percent.

Based on these assumptions and on only three test observations, the 1990 state projection of 1,210,300 in this report is probably between $\pm$0.4% and $\pm$1.6% of what the actual figure will be. This probable range of error expressed in numbers of people is between 4822-19,060 if the error is positive and between 4861-19,680, if the error is negative.

*The projected figure may be greater or less than the (unknown) true value. This analysis deals with the absolute value of the percent error, regardless of whether it is positive or negative.

Table 2 shows the estimated absolute percent of error by county. The projections for York and Cumberland Counties appear to be the most accurate and those for Sagadahoc and Lincoln Counties, the least accurate. This is consistent with the known fact that the accuracy of population projections is positively correlated with both population size and the consistency of the pattern of net migration. Thus, based on the assumptions stated above,and only one test observation, a projection five years from the date of most recent estimate for York County has an estimated range in absolute error of between 1.4 and 3.6 percent. The estimated range for Sagadahoc County is between 14.5-18.1 percent. In terms of percentages, there is a very large difference between the best and the poorest projection. However, it should be noted that an error of 18.1 percent in Sagadahoc County represents about the same magnitude as an error of 3.1 percent in York County, or about 5,700 people.

Table 3 shows the estimated accuracy of projections for specific age groups. This table seems to suggest that for some age groups, especially the under 5 age group, either we or the U.S. Census Bureau or both, have produced projections of rather low quality. The following is an attempt to separate the components of our 1986 population estimates of the age group under 5 years of age in order to pinpoint possible differences between our estimate and that of the U.S. Census Bureau. Between July 1, 1982 and July 1, 1986 there were 83,725 resident births belonging to the age cohort of those who were under 5 years of age on July 1, 1986. During the same period, there were 859 deaths to this age cohort. Our estimate of the population under 5 years of age on July 1, 1986 was 85,185. Therefore, our estimated net migration for this age cohort during this period was 85,185 - 83,725 + 859 or 2,319. The 1986 estimate by the U.S. Census Bureau for this age group was 82,062. Their estimated net migration for this age cohort was 82,062 - 83,725 + 859 or a -804. The only difference between the two estimates is that our estimated net migration was 464 in-migrants per year and theirs was a net of 161 out-migrants per year. If one projects our migration rates into the future, the cause of the high estimated error rates is quite apparent. However, it is impossible to conclude as to which estimate is most accurate.

Subject Errors in School Data Used to Estimate Population by MCD by Age Group

---

We recently discovered errors in the school enrollment data used to estimate the net migration component of the population estimates for the years 1981-1986. The errors were as follows: (1) The school enrollment file prepared by the Department of Education counted 113 resident students of Portland, who were attending Wynflete School, as residents of Readfield for the 1980 school year, (2) for the years 1981-1984, out-of-state students attending the Kents Hill School, were counted as residents of Readfield. These out-of-state students numbered 155 in 1981, 159 in 1982, 178 in 1983, and 197 in 1984.

Tables 1-4 of the enclosed tables describe the errors and give the amount of adjustment needed to correct for the errors in Readfield, Winthrop and Portland. Table 5 shows adjustments factors for the remaining MCD's in Kennebec and Cumberland counties. The adjustment factor multiplied by the orginal estimated population will produce the correct population estimate. Table 6 shows the amount of adjustment needed to correct for the erroneous school data in each population projection for the years 1987-1996 which was published in May, 1988.

We would like to thank Jeff Herman, planner for the Southern Kennebec Planning and Development Council, who was primarily responsible for the discovery of these errors.

DEW:sc

TABLE 5

ADJUSTMENT FACTORS FOR OTHER TOWNS IN KENNEBEC AND CUMBERLAND COUNTIES EXCLUDING READFIELD, WINTHROP AND PORTLAND BY YEAR

YEAR	ADJUSTMENT FACTORS KENNEBEC	CUMBERLAND
1981	1.00121	1.00223
1982	1.00152	1.00272
1983	1.00229	1.00273
1984	1.00283	1.00266
1985	0.99690	1.00241
1986	0.99706	1.00237

TABLE 6

ADJUSTMENTS* TO THE TOTAL POPULATION PROJECTIONS FOR EACH YEAR 1987-1996 TO CORRECT FOR THE ERRONEOUS SCHOOL DATA

PROJECTION YEAR	READFIELD	WINTHROP	PORTLAND	WESTBROOK GORHAM SCARBORO SO.PORTLAND WINDHAM BRUNSWICK	WATERVILLE AUGUSTA
1987	100	250	-400	50	- 50
1988	100	300	-450	50	- 50
1989	150	350	-500	50	- 50
1990	150	350	-600	50	-100
1991	150	400	-650	100	-100
1992	200	450	-700	100	-100
1993	200	500	-800	100	-100
1994	200	500	-850	100	-100
1995	200	500	-900	100	-100
1996	200	600	-950	100	-100

*There would be small negative adjustments (less than 25) to each of the other 26 MCD's in Kennebec County, and small positive adjustments to the other 18 MCD's in Cumberland County. Because of the rounding procedure, very few projections would change.
